# Organko Daily

---

Organko Daily was designed to make collecting kitchen waste as practical as possible throughout the day. Its compact size of 3.3 liters enables you to keep it at hand whenever you are preparing food. Another great feature of this amazing organic waste bin, made from postconsumer recycled plastics, is that it enables you to manage it with a single hand. Even Organko Daily's lid is designed in a way that you can hold the bin and open the lid simultaneously, all with one hand. Moreover, Organko Daily is dishwasher safe. On top of that, its lid can be removed from the base quickly, which enables you to place it in your dishwasher with ease.

With all these features, Organko Daily significantly improves user experience in the COLLECT phase of the #bokashiloop. In addition, it also contributes to a more efficient bokashi PROCESS. By collecting organic waste throughout the day in Organko Daily, you easily reduce opening your indoor bokashi composter to once per day or even once every two days. As such, you ensure airtight conditions in the composter are not disturbed too often.

This ultimate kitchen waste-collecting bin is for everyone who prepares their own food. You can choose your Organko Daily in gray or in black color.
